A Computer Science Student, working on achieving big dreams  
Noida, Uttar Pradesh, India

## Summary

Hi! Currently I am doing B.Tech in Computer Science Engineering (Artificial Intelligence) at Dr. A.P.J. Abdul Kalam Technical University. In my studies, I concentrate on algorithms, data structures and AI applications. I take part in projects like Java based chess game for students and Chess Club participation which allows me to explore strategic thinking and problem solving beyond what is digital.

I have a strong background in programming languages such as Java, JavaScript, Python, C++ and web technologies including HTML and CSS. Moreover, alongside my studies, I have taken online certifications on coding to improve my skills in software development as well as problem-solving.

When it comes to programming, my enthusiasm revolves around constant learning and its practical aspects. What drives me is the opportunity of mastering new technology that can be applied creatively to project solutions having real life significance. I strongly believe in teamwork since through it hard work becomes fun while complementing this with commitment makes a great contribution towards positive development in the software industry.

Therefore, I am excited about working on projects that are challenging the boundaries of technology.
